

## PROTECT-IT MAXI COLUMN PROTECTION PUT TO THE TEST

3<sup>rd</sup> December 2008 Botany, NSW Australia

The client has requested that their name be with-held.

PROTECT-IT MAXI Structural Column Protection recently provided an impressive demonstration of its ability to protect structural columns from serious damage. The following photos were taken by myself at a major 3PL logistics centre in a Sydney suburb NSW.

- The columns that you see below are 15mm thick structural column approx 600mm x 300mm.
- The damage that you see was done by a forklift truck in separate incidents.
- These are just two of many damages columns in that facility
- It is most likely that these columns will have to be replaced at a cost or approximately \$100,000 each.

We then installed Protect-it MAXI onto one of the undamaged columns. The manager of the facility reversed a fork truck into the column at an estimated speed of 6kph. This was witnessed by three onlookers.

DURING IMPACT

AFTER IMPACT

### RESULTS

- The column shook on impact.
- There was NO damage to the column.
- There was minimal damage to the Protect-it MAXI
- Total cost of Protect-it MAXI = \$250-\$300
- Alternative cost of replacing a column = \$100,000
- Importantly the customer was impressed.

Don't, take a risk. Order Protect-it MAXI now.
